

# DPX-76

## eXplore Series

**DPX-76 eXplore Series**, the new PVC system in DAKO's range, is an energy-saving solution that ensures high comfort of day-to-day use, an optimal indoor microclimate and effective thermal insulation at an affordable price.

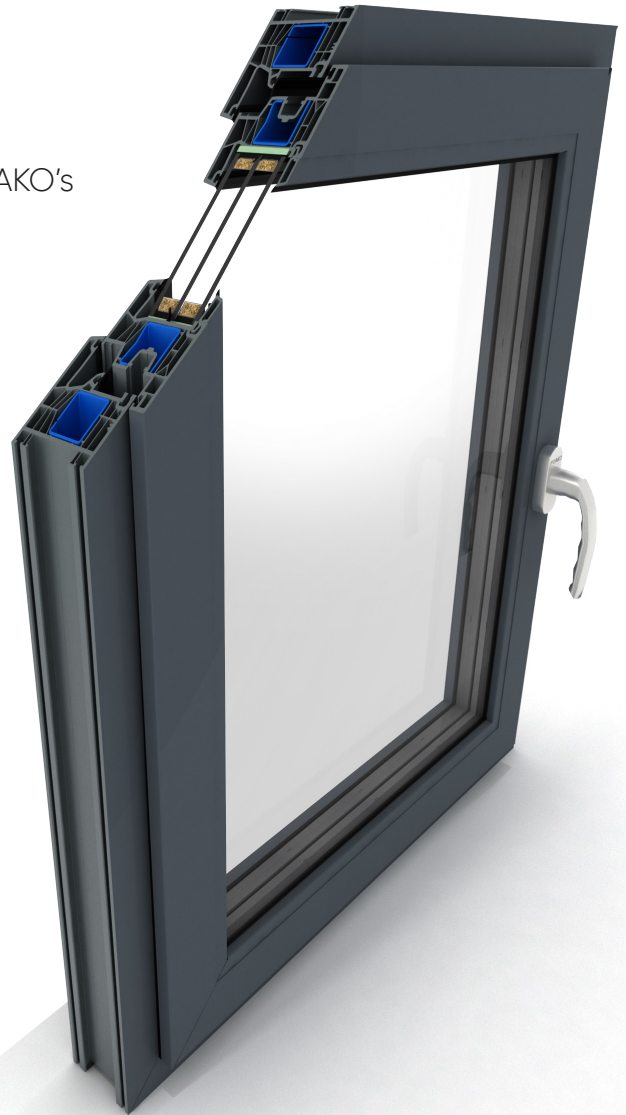

The system includes windows, patio doors and exterior doors, and meets the requirements of both single-family and development buildings.

### Aesthetics and unique style of modern PVC joinery

The DPX-76 eXplore Series stands out with its exceptional design, consistent with the latest trends in architecture: an elegant profile, precise V-Perfect welding, and a wide colour range, including new shades of concrete grey and black-brown. That makes it the ideal choice for new construction projects and renovations of existing buildings.

### Technology that pays off

With an installation depth of 76 mm and modern design solutions, the system offers high thermal insulation ( $U_w = 0.78 \text{ W/m}^2\text{K}$ ), which results in energy savings. Three seals and a "warm frame" reduce heat loss, while functional hardware, including the Secustik® handle and burglar-proof latches, ensure user comfort.

### Discover key technical details:

- Installation depth: 76 mm
- $U_w^* = 0.78 \text{ W/m}^2\text{K}$
- Chamber number: 6
- Number of seals: 3
- Glazing unit: 4/18/4/18/4 C.R.
- Surface mounted hinges
- 2 burglar-proof latches
- Secustik handle

\*Value of the coefficient for the reference structure: 1,230x1,480 mm window
